Preface:

This book is designed to guide and educate Kinder pupils about the basic facts in computer.

The topics are presented in the simplest manner so that the reader will be able to grasp the facts and appreciate the learning process while enjoying oneself.

After reading this book, the readers should be able to identify the basic parts and components of a computer and know the advantages of each of these components as well as other details.

The joy of learning should not be kept to oneself only, but should not be kept to oneself only, but should be shared with others for it to grow. So, come and learn the computer with me.
