Foreword:

Computers have already pervaded our way of life and in fact, it is already inseparable in almost everything. They make corporate operations faster and more efficient. They are also vital in the academe especially for students to meet academic requirements and teachers to make teaching more exciting and adventurous. Even basic home equipment are now being run by computers making the absence of such a big setback for modern day people.

The fast-paced technological advances in our world is basically manifested in the rapid development of computers. In fact, computers of a few years back could be rendered obsolete when better operating ones are invented. This trend, thus, requires students and professionals alike to be up-to-date in computer terms and jargons to maximize knowledge and usage of computers. This dictionary, then, would be an effective tool in this purpose. Terms and words from earlier computer generations to the present were gathered and compiled in this dictionary to benefit computer newbies and junkies alike.
